

February 10, 2022
For Immediate Release

COVID-19 activity continues in Nain

The Nunatsiavut Government is advising that COVID-19 is still active in the community of Nain. There have been no recoveries since the last update on February 7, and there are no hospitalizations due to the virus.

There are no known cases of the virus in any other Labrador Inuit community at this time.

Public health officials continue to advise that it is likely that the virus that causes COVID-19 will continue to present itself in all Labrador Inuit communities. Individuals with symptoms, with no known exposure to the virus, should contact 811 or complete the online assessment tool at COVID Assessment and Referral ([HOME - NLCHI](#)) to determine if testing is required.

Please note that the second vaccine dose for children between five and 11 years of age is currently being rolled out in all Labrador Inuit communities. The vaccine is still available for those 12 years of age and over for first and second shots, and to those 18 years of age and over for first, second and booster shots. To make an appointment, please contact your community Public Health office.

Residents of all Labrador Inuit communities are asked to keep following all public health guidance and protocols to help prevent exposure and spread of the virus.

Symptoms of COVID-19 are defined as having ONE of the following:

- Fever (including chills/sweats)
- Cough (new or worsening)
- Shortness of breath or difficulty breathing
- Runny, stuffy or congested nose (not related to seasonal allergies or other known causes/conditions)
- Sore throat or difficulty swallowing
- Headache
- Acute loss of sense of smell or taste
- Unusual fatigue, lack of energy
- New onset of muscle aches
- Loss of appetite
- Vomiting or diarrhea for more than 24 hours
