For Immediate Release

## **COVID-19 activity reported in Nain**

The Nunatsiavut Government wishes to report that there is currently COVID-19 activity in the community of Nain. All cases are isolating and contact tracing is ongoing. There are no known cases of the virus in any other Labrador Inuit community at this time.

The Nunatsiavut Government has also been informed by Vale of increased COVID-19 activity at Voisey's Bay. Vale will be issuing more information later today.

Public health officials continue to advise that it is likely that the virus that causes COVID-19 will continue to present itself in all Labrador Inuit communities. Individuals with symptoms, with no known exposure to the virus, should contact 811 or complete the online assessment tool at COVID Assessment and Referral ([HOME - NLCHI](#)) to determine if testing is required.

Please note that the second vaccine dose for children between five and 11 years of age are currently being rolled out in all Labrador Inuit communities. The vaccine is still available for those 12 years of age and over for first and second shots, and to those 18 years of age and over for first, second and booster shots. To make an appointment, please contact your community Public Health office.

Residents of all Labrador Inuit communities are asked to keep following all public health guidance and protocols to help prevent exposure and spread of the virus.

Symptoms of COVID-19 are defined as having ONE of the following:

- Fever (including chills/sweats)
- Cough (new or worsening)
- Shortness of breath or difficulty breathing
- Runny, stuffy or congested nose (not related to seasonal allergies or other known causes/conditions)
- Sore throat or difficulty swallowing
- Headache
- Acute loss of sense of smell or taste
- Unusual fatigue, lack of energy
- New onset of muscle aches
- Loss of appetite
- Vomiting or diarrhea for more than 24 hours
